Swisslog GmbH

Job-Titel:
Project Manager (m/w/d) Software Development

Job-Beschreibung
- Manage and plan the project with regard to scope, budget, resources, timeline, risk, project phases and iterations
- Guide the implementation team on applying our quality processes
- Align project timelines and scope of iterations with the demands of customer projects in our regions
- Setup project infrastructure and create project charter and project plans
- Provide progress information and resource needs to the Project and Portfolio Management office on a weekly basis
- Prepare and hold professional presentations using PowerPoint and other supporting tools, e.g. in monthly calls to the global community
- Report regularly on all projects, coordinate content publication in social media and other channels

Anforderungsprofil
- You have successfully completed a degree in the field of logistics, engineering (mechanical, controls or software) or management subject or comparable industry
- It would be a bonus if you already have experience with project management using agile methods, distributed teams and an understanding of integrated systems and IT landscapes
- Open minded in assessing and solving technical and ongoing initiative issues
- Experience working with a distributed team and willingness to travel (10%)
- Finally, you are fluent in German and English
